

The future of paperless data exchange

Despite the advances that have come with modern technology, many medical practices continue to use “old-school” technology like faxing as part of their everyday workflow. Every day, millions of pages are transmitted between healthcare providers and organizations to achieve optimal patient outcomes. OP eFax offers an affordable, HIPAA-compliant electronic fax solution for busy pediatric practices. Our fully integrated offering has everything you need to securely send and receive fax communications — no buzzing machine, no fax server, and no long-term commitment. **It's that easy.**

Here's why you'll love our solution:

-  Workarounds involving “Print to Fax” for outbound faxing and usage of a shared network for inbound faxing are no longer necessary.
-  All fax management, both inbound and outbound, is handled directly within OP.
-  Anything that can be electronically transmitted from OP can be sent via eFax.
-  Informative statuses are provided in real-time so that you always know the progression of outbound fax transmissions.

**It's time to reimagine the role that eFax can have in your practice
and your referral network.**
