

OP eLabs™

Save time, reduce errors, and streamline your diagnostic test workflow.

OP eLabs provides a bi-directional connection between your office and regional and national laboratories, including Quest and LabCorp. With this solution, you're able to streamline your lab orders and results management process, increase staff productivity, control costs, and eliminate manual data transfers, which are prone to errors.

Seamless Bi-directional Communication

- Process both orders and results
- Provide live access to the most current lab test codes

Electronic Orders

- Quickly send your orders directly to the lab from within OP
- Reduce errors by auto-populating the location, preliminary diagnosis, insurance payer information, related ICD-10 code, and order number
- Generate lab specimen labels when you're ready to send the order
- Save time by using integrated rules that allow you to get the order right the first time
- Present the most up-to-date test ID code options at the time of order activation

Electronic Results

- Streamline workflows and reduce manual tasks with results and reports that are seamlessly delivered back to your office
- Increase efficiency for your staff by leveraging the patient-centric record that automatically matches results to the patient chart within OP
- Gain real-time access to time-sensitive results

Lab Panels

- Create standard or custom panels lab to save time and reduce errors
- Incorporate panels into OP templates
